

EXAMPLES OF USE

for pump
entirely made
of aluminum
or aluminum
and
polypropylene

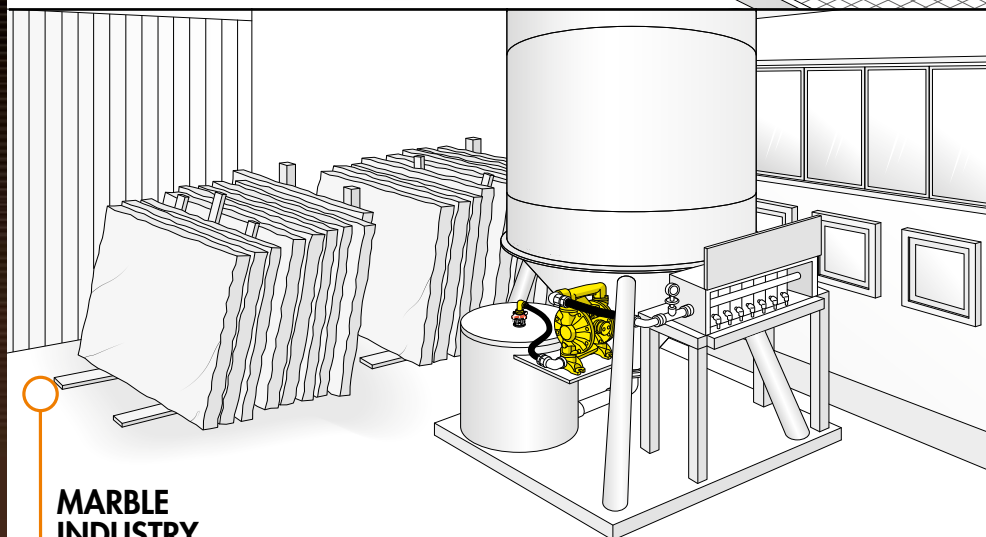

Diaphragm pumps are the ideal solution in different working environments, also the most aggressive ones.

These are some examples of application:

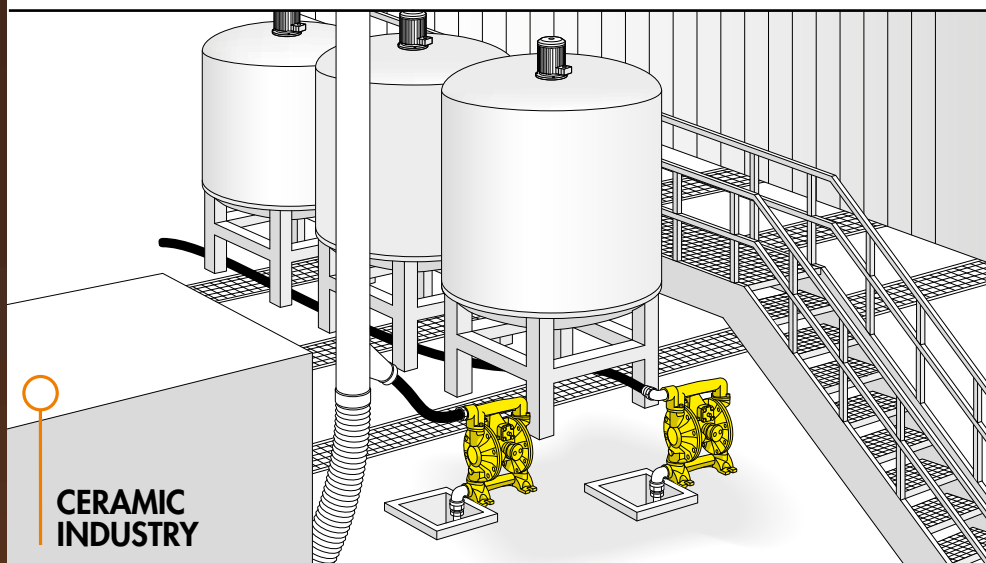

- transfer slip and glaze in the ceramics industry
- distribution of adhesives, paints, cellulose pulp in the paper and printing industry
- pumping of spent acids, dyes and wastewater in the textile and tanning industry
- distribution and mixing of paints in the colors/ varnishes industry
- pumping of waste oils and lubricants in a garage
